Abas, F.	Prediction of the thermal performance of solar air heaters by Internet-based mathematical simulation	579–587
Adam, N. M.	Prediction of the thermal performance of solar air heaters by Internet-based mathematical simulation	579–587
Agnew, B.	Examination of the performance envelope of combine Rankine, Brayton and two parallel inverse Brayton cycles	377–385
Agrawal, V. P.	Maintenance strategy for a coal-based steam power plant equipment: a graph theoretic approach	619–636
Akpinar, E. K.	Statistical analysis of wind energy potential on the basis of the Weibull and Rayleigh distributions for Agin-Elazig, Turkey	557–565
Akpinar, S.	Statistical analysis of wind energy potential on the basis of the Weibull and Rayleigh distributions for Agin-Elazig, Turkey	557–565
Alabdoadaim, M. A.	Examination of the performance envelope of combine Rankine, Brayton and two parallel inverse Brayton cycles	377–385
Alaktiwi, A.	Examination of the performance envelope of combine Rankine, Brayton and two parallel inverse Brayton cycles	377–385
Alam, M.	Performance of NO*x* reduction catalysts with simulated dimethyl ether diesel engine exhaust gas	89–95
Al-Hamdan, Q. Z.	Optimization techniques for designing an inward flow radial turbine rotor	655–668
Angelino, G.	Ejector-assisted liquid metal topping cycles	111–121
Audus, H.	Gas turbine engine configurations for power generation cycles having CO_2 sequestration	1–13
Barbosa, J. R.	Methodology for gas turbine performance improvement using variable-geometry compressors and turbines	541–549
Barnes, D.	An investigation into the flow within inclined rotating orifices and the influence of incidence angle on the discharge coefficient	55–69
Bashria, A. A.	Prediction of the thermal performance of solar air heaters by Internet-based mathematical simulation	579–587
Bassily, A. M.	Modelling and numerical optimization of dual- and triple-pressure combined cycles	97–109
Benito, D.	Recent developments in gas turbine component temperature prediction methods, using computational fluid dynamics and optimization tools, in conjunction with more conventional finite element analysis techniques	241–255
Blanco, E.	Performance of a centrifugal pump running in inverse mode	265–271
Bringhenti, C.	Methodology for gas turbine performance improvement using variable-geometry compressors and turbines	541–549
Bruno, J. C.	Stand-alone and grid-connected performance analysis of a regenerative micro gas turbine cogeneration plant	15–22
Bryden, I.	Choosing and evaluating sites for tidal current development	567–577
Carapellucci, R.	Carbon dioxide removal via a membrane system in a natural gas combined-cycle plant	219–229
Carelli, M. D.	Modular integral water reactors: the ultimate in safety and simplicity	293–307
Chittajallu, K. M.	Model-based control strategies in the dynamic interaction of air supply and fuel cell	487–499
Cho, S.-Y.	Experimental study of the incidence effect on rotating turbine blades	669–676
Choi, S.	Unsteady one-dimensional model for a bed combustion of solid fuels	589–598
Choi, S.-K.	Experimental study of the incidence effect on rotating turbine blades	669–676
Cooke, A.	Detection of shaft-seal rubbing in large-scale power generation turbines with acoustic emissions. Case Study	71–81
Coronas, A.	Stand-alone and grid-connected performance analysis of a regenerative micro gas turbine cogeneration plant	15–22
Corsini, A.	Using sweep to extend the stall-free operational range in axial fan rotors	129–139
Crane, R. I.	Scope for reductions in the cost of CO_2 capture using flue gas scrubbing with amine solvents	231–239
Crane, R. I.	Preliminary assessment of electricity costs for existing pulverized fuel plant retrofitted with an advanced supercritical boiler and turbine and solvent CO_2 capture	551–555
Crump, M. W.	Modular integral water reactors: the ultimate in safety and simplicity	293–307
Darkwa, K.	Heat transfer in neuron composite laminated phase-change drywall	83–88
Daud, M.	Prediction of the thermal performance of solar air heaters by Internet-based mathematical simulation	579–587
De, S.	First and second law performance variations of a coal gasification fuel-cell-based combined cogeneration plant with varying load	477–485
Dewan, A.	Review of passive heat transfer augmentation techniques	509–527
